

Our Proposal (3) Mixed Signal & Full Custom

- ❑ For Mixed Signal/Full custom needs or BLOCK level
 - Prepare area, box size, pins
 - Use VCP to place devices and cells and arrange if needed to comply to constraints
 - Run VCR and fix constrained signals (if needed)
 - Use SiFix to do a DRC light (or total) cleaning (not 100% fix needed)
 - Run LVS to ensure correctness to schematic
 - Run parasitic extraction and deliver results to design for post layout simulations
